Projects

Ride-Hailing Demand Forecasting and Driver Allocation | Python, XGBoost

- Developed the supervised learning module for pre-trip taxi trip-duration prediction using XGBoost, as part of a full-stack machine learning application for ride-demand forecasting, driver allocation, and personalized driving recommendations.
- Performed data preprocessing and feature engineering on NYC taxi and weather data, working with trip, geographical, temporal, and weather-related features for the prediction model.
- Contributed to the frontend and collaborated on integrating ML components with the dashboard.

Studio Namma Clone | HTML, CSS, JavaScriptGitHub

- Designed and developed a Studio Namma-inspired web-page clone using HTML, CSS, and JavaScript.
- Applied JavaScript DOM manipulation and event handling to add interactivity, and used CSS properties for layout and styling.

Achievements
